PROFESSIONAL SUMMARY

Computer Science undergraduate at the Higher Technological Institute (HTI), expected to graduate in 2027, building a DevOps and Cloud Engineering profile on a security-first foundation in ethical hacking, CTFs, and OWASP. Applies Linux administration (Arch Linux daily use), Docker, Nginx, Bash automation, and AWS EC2 deployment in a home lab and personal projects. Completed the TechWorld with Nana DevOps and DevSecOps bootcamp curricula (Kubernetes, Terraform, Ansible, CI/CD, monitoring, cloud and Kubernetes security) and AWS Academy Cloud Foundations and Cloud Architecting (Aug 2026). Has built 12 web, automation, and tooling projects, including WebSocket, WhatsApp API, and PostgreSQL-backed systems, which gives an end-to-end view of how software moves from source code to deployment and operations. Named a Top Achiever in Cairo by the Digital Egypt Pioneers Initiative (DEPI), April 2026.

TECHNICAL SKILLS

Hands-on = used in the home lab or personal projects. Coursework = studied through structured bootcamp and academy curricula.

Linux & Systems Administration (hands-on): Linux (Arch Linux daily use; Ubuntu/Debian familiarity; Red Hat fundamentals), command-line interface (CLI), users and groups, file permissions, package management, processes, systemd, SSH, service troubleshooting, journalctl.

Cloud & Infrastructure: AWS (Amazon EC2 hands-on; IAM, VPC, S3, ECR, EKS, AWS Systems Manager (SSM), AWS STS via coursework), DigitalOcean, cloud computing, virtualization, VirtualBox, Nginx.

Containers & Orchestration: Hands-on: Docker, Dockerfiles, images and containers. Coursework: Docker Compose, container registries, Kubernetes (Pods, Deployments, Services, Namespaces, Ingress, ConfigMaps, Secrets, Persistent Volumes, StatefulSets), Helm, Kustomize, Kubernetes Operators, Amazon EKS.

CI/CD & Release Engineering: Hands-on: Git, GitHub, GitLab, NPM. Coursework: GitLab CI/CD, GitLab Runners, Jenkins, Jenkins Pipelines, Shared Libraries, build and release automation, artifact management, Nexus Repository, Gradle, Maven, deployment pipelines.

Infrastructure as Code & Automation: Hands-on: Python, Bash/Shell scripting. Coursework: Terraform (state and remote state), Ansible (inventories, playbooks), configuration management, infrastructure provisioning, GitOps.

Monitoring & Observability (coursework): Prometheus, Alertmanager, Grafana, CloudWatch, CloudTrail, metrics, dashboards, log monitoring, alerting, incident detection, infrastructure and application monitoring.

Application & Supply Chain Security: Hands-on: ethical hacking and penetration testing fundamentals, CTFs, TryHackMe, Kali Linux, Wireshark, web application security assessment. Coursework: DevSecOps, Secure SDLC, OWASP Top 10, SAST, DAST, Software Composition Analysis (SCA), vulnerability management, CVE, CWE, secret scanning, GitLeaks, Semgrep, NJSScan, OWASP ZAP, DefectDojo, dependency and container image scanning.

Cloud & Kubernetes Security (coursework): AWS IAM and least-privilege access, IAM Roles, Kubernetes RBAC, OPA, OPA Gatekeeper, Policy as Code, HashiCorp Vault, AWS Secrets Manager, External Secrets Operator, Istio, service mesh, mutual TLS (mTLS), Kubernetes Network Policies, CIS Benchmarks, AWS Config, Compliance as Code.

Networking & Security Fundamentals: TCP/IP, DNS, DHCP, HTTP/HTTPS, subnetting, NAT, routing fundamentals, firewalls, IDS/IPS concepts, IP aliasing, dnsmasq, nftables, network virtualization (SDN, VXLAN concepts), network troubleshooting.

Programming & Databases (hands-on): Python, Bash, JavaScript, TypeScript, Node.js, Express.js, React, PHP, HTML/CSS, Tailwind CSS, REST APIs, WebSockets (Socket.IO), webhooks, PostgreSQL, MySQL.

SELECTED PROJECTS & PRACTICAL EXPERIENCE

Linux & Infrastructure Home Lab | Arch Linux, Docker, Nginx, Bash, nftables — Personal Practice

- Administer Linux systems daily: manage users, groups, permissions, packages, processes, and systemd services, and troubleshoot remote systems over SSH.
- Deploy and manage Docker containers, configure Nginx hosting, automate routine tasks with Bash, and diagnose faults using journalctl and CLI network tools.
- Set up a home network on a single wired Ethernet port using IP aliasing, dnsmasq, and nftables so one physical interface serves two subnets without additional hardware.

Automation & WhatsApp Bot System | Node.js, Express.js, Webhooks, WordPress REST API — 2026

- Architected a webhook-driven pipeline that ingests WhatsApp group messages, classifies and validates classified-ad listings, filters duplicates using short-term in-memory message fingerprints, and publishes approved records through the WordPress REST API.
- Replaced a manual scrape, verify, and upload workflow with fully automated message processing, running in production with listings published within seconds of receipt.

Blog Application on AWS EC2 | PHP, MySQL, Linux, AWS EC2 2024

- Built and deployed a self-hosted blog in vanilla PHP on a Linux-based Amazon EC2 instance, with session-based authentication, dynamic article rendering, and a relational MySQL schema for users, posts, tags, and comments.
- Secured database access with protected SQL statements against parameter tampering.

Shoky LMS | React, Node.js, Express.js, PostgreSQL, WhatsApp Business API Lead Architect, 2025

- Led the architecture of a B2B educational platform for colleges and educators: institution-based onboarding, role-based access, secure document and video delivery, exam delivery, and WhatsApp Business API notifications.
- Built REST APIs and authentication in Node.js/Express over a PostgreSQL schema, with React dashboards for students and teachers. Live at helper.teamshoky.tech.

BuzzBattle.io | React, Vite, Node.js, Socket.IO, Tailwind CSS 2026

- Developed a real-time quiz battle platform with room-code joining, host controls, live buzzer synchronization, and team scoring; server-side lockout resolves the first buzz fairly. Monorepo with a separate React client and Node.js/Socket.IO backend. Live at buzzbattle.io.

Echo Vision | AI Assistive Tool for Blind Students

- Built an AI-powered assistive tool that turns webcam or ESP32 camera input into spoken output, using a locally hosted Qwen2.5-VL vision model and bilingual (Arabic and English) text-to-speech.
- Reduced capture-to-audio latency through streaming generation, background speaker threading, model warm-up, and in-memory audio rendering.

Additional Projects

- **Islamic Shoky (2026):** VS Code extension published on the Visual Studio Marketplace with offline prayer-time calculation, Pomodoro timer, and task list in the status bar (JavaScript, VS Code APIs).
- **Shoky Mentor (2025):** PWA hub of 45+ frontend resources with local search and favorites (Vanilla JS, CSS).
- **Othama WhatsApp Bot (2025):** Node.js group-moderation and grades-inquiry bot.
- **CyberCrew Competition Portal (2024):** Node.js and WebSocket cyber-competition site with real-time scoreboards.
- **Rashed backend:** Migrated a Node.js backend from MSSQL to PostgreSQL (five scripts, parameterized queries).
- **Web projects (2024-2025):** Thqah Law Firm website (React, Strapi headless CMS, Node.js), Brilliant Trend landing page (React), PureTune landing page (React).

EDUCATION

Bachelor of Computer Science | Higher Technological Institute (HTI), Egypt Expected Graduation: 2027

CERTIFICATIONS & TRAINING

Cloud, Linux & DevOps: TechWorld with Nana: DevOps Bootcamp and DevSecOps Bootcamp (completed structured self-study of both curricula). AWS Academy Graduate: Cloud Foundations (Aug 2026) and Cloud Architecting (Aug 2026), AWS Academy training badges. Red Hat System Administration I (MaharaTech, May 2024). Cloud and Virtualization Concepts (MaharaTech, Feb 2024). Network Virtualization Concepts (MaharaTech, May 2024).

Security & Networking: Ethical Hacking (MaharaTech, Sep 2024). Introduction to Network Security (MaharaTech, Sep 2024). OWASP Top 10 (Web) 2021 (MaharaTech, Mar 2025). Cyber Security for Beginners (MaharaTech, Jul 2024). Computer Network Fundamentals (MaharaTech, Jul 2024) and Implementation of Computer Network Fundamentals, practical training (MaharaTech, Apr 2024). Advent of Cyber 2024 (TryHackMe, Dec 2024).

Development & Data: Database Fundamentals (MaharaTech, Apr 2025). Python Programming Basics (MaharaTech, Feb 2024). DEPI Business English Track (Dec 2025). DEPI Frontend Development Track.

AWARDS & ACHIEVEMENTS

- **Top Achiever in Cairo,** Digital Egypt Pioneers Initiative (DEPI), Apr 2026: recognized for outstanding performance, technical leadership, and excellence in core technology paths.
- **Bug Bounty:** Submitted an HTML injection vulnerability report through HackerOne (Sep 2024).

LANGUAGES

Arabic: Native. **English:** Advanced.
